Final Project**

Title: Two Page Portfolio Website (HTML & CSS)

Submitted to: Ma'am Faryal Tanseer

Submitted by: Fajar Tariq

Roll no: F25BSCS063

Section: A

Semester: 1

Submission Date: 27 November 2025

Index file:

Index file contains navigation bar, a brief introduction about myself and a picture.

The navigation bar consists of several sites and is of pink color, contains text of white color. The code for navigation bar is given below:

```
nav {  
    width: 100%;  
    background-color: #FFB6DD;  
    display: flex;  
    align-items: center;  
    justify-content: center;  
    position: relative;  
    height: 70px;  
}  
.nav-links {  
    list-style: none;  
    display: flex;  
    gap: 20px;  
    padding: 0;  
    margin: 0;  
}  
.nav-links li a{  
    padding: 10px 20px;  
    background: #FFB6DD;  
    color: white;  
    cursor: pointer;  
    text-decoration: none;  
    font-size: 25px ;  
}  
.nav-links li a:hover {  
    background-color: #d9c8ff;  
}
```

I have added one image of mine and the code for it is given below:

```
img{  
    display:flex;  
    width:200px;  
    object-fit:cover;  
    vertical-align:middle;  
    height:200px;  
    border-radius: 20px;  
}
```

```

```

For the introduction paragraph I have used the simple paragraph function <p>, and in the style I have justified it in the center, and also aligned it in the center. I have used class wrapper for its proper aligning and profile for it to appear beside the text with some gap.

```
.profile {  
    display: flex;  
    justify-content: space-between;  
    align-items: center;  
    gap: 5rem;  
    height:calc(100vh-50px);  
    padding:0 20px;  
  
.wrapper {  
  
    display: flex;  
    align-items: center;  
    justify-content:center;  
    gap: 5rem;  
    height:calc(100vh-50px);  
    padding:0 20px;  
    margin-top:130px;  
}  
.intro{  
    flex:1;  
}  
p{  
    color: black;  
    font-size:170%;  
    max-width:500px;  
}
```

Information file:

Information file contains the information about my projects, skills, achievements, and my work experience followed by a simple picture.

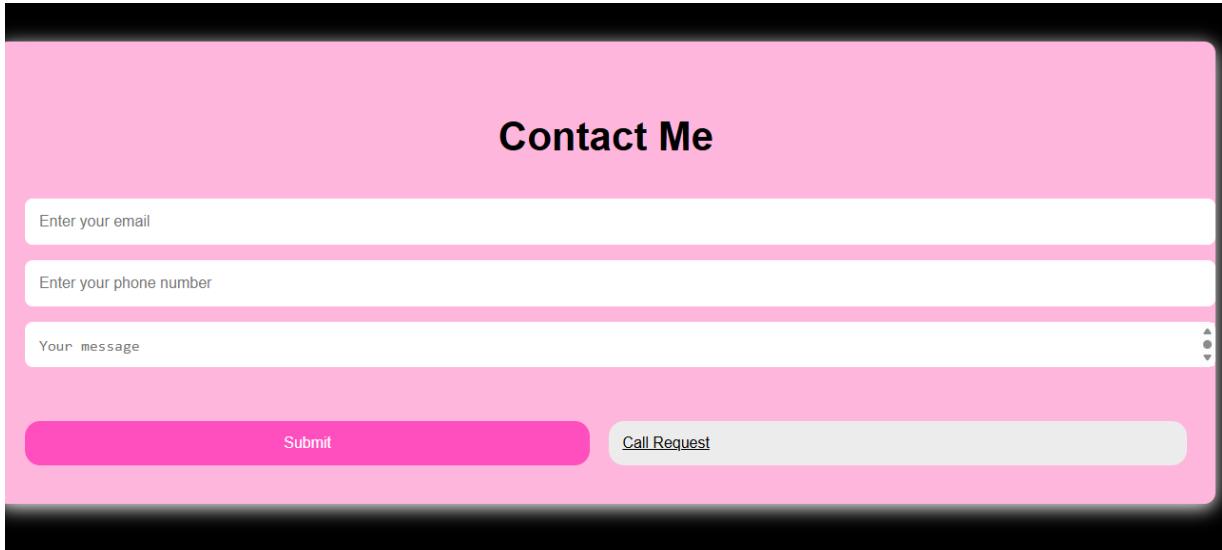

The code for all the data is given below:

```
.3  
.4 <div> .stats-wrapper {  
.5     display: flex;  
.6     justify-content: center;  
.7     margin-top: 50px;  
.8   }  
.9 <div> .stats-grid {  
.10    display: grid;  
.11    grid-template-columns: repeat(2, 200px);  
.12    gap: 60px;  
.13  }  
.14  
.15 <div> .stat-box {  
.16     display: flex;  
.17     align-items:flex-start;  
.18     gap: 20px;  
.19   }  
.20  
.21 <div> .line {  
.22     width: 6px;  
.23     height: 80px;  
.24     border-radius: 2px;  
.25   }  
.26  
.27   .purple{ background-color: #ffb6dd; }  
.28
```

The class stats-grid is basically used for arranging all the data in a grid form, making it look presentable. The code for the image is same as the first one.

And for contacting following webpage is made which is given below, it allows the user to enter their e-mail, phone number and their message for me. There's also a submit button for submitting the message and a call me button for directly calling me.

The code for this is given below:

```
<style>

.container {
    width: 90%;
    max-height: 400px;
    margin: 70px auto;
    display: flex;
    flex-direction: column;
    background: #fffb6dd;
    padding: 40px 30px;
    border-radius: 12px;
    box-shadow: 0 4px 20px #white;
}

h2 {
    text-align: center;
    margin-bottom: 40px;
    font-size: 42px;
    color: black;
}

input, textarea {
    width: 100%;
    padding: 14px;
    margin-bottom: 16px;
    border: 1px solid #white;
    border-radius: 8px;
    font-size: 16px;
}

.buttons {
    display: flex;
    gap: 20px;
    margin-top: 40px;
}

.btn {
    width: 100%;
    padding: 14px;
    background-color: #fffb6dd;
    border: none;
    border-color: #white;
    border-radius: 16px;
    font-size: 16px;
    cursor: pointer;
    transition: 0.3s;
}

.primary {
    background-color: #ff4fbf;
    color: #white;
}

.secondary {
    background-color: #ECECEC;
    color: black;
}

</style>
```

After that I created a repository on github and uploaded my files there and after I go to settings and then pages and then I live my website. Here's the URL of my website:
